SUMMIT SERIES DEVICES HAVE FULL REMOTE MANAGEMENT ACCESS VIA SUMMIT CONTROL

The Summit Control and Summit View allow companies to maintain constant contact with deployed devices without site visits. Through a highly secure connection, users can perform a comprehensive set of activities including system administration, device monitoring, user management, and reporting. Benefits of this web portal can be utilized by a wide range of users.

Executive/ Owner

Uses Summit View to see an executive overview of cash and operations across all sites.

Treasury Manager/ Controller

Uses Summit Control reporting to oversee working capital from provisional credit. Uses Summit View to actively manage the cash position at site, region and enterprise levels.

Loss Prevention (LP)/ Safety and Security Manager

Uses Summit View to monitor alerts and security issues. Uses Summit Control to investigate losses and monitor/manage users and their permissions.

Accounting Professional

Uses Summit Control to run reports and reconcile cash against point-of-sale data and bank deposits.

Operations Manager

Uses Summit View and Control to manage users, monitor cash deposits and activity, and be alerted about issues that might require action.

SUMMIT CONTROL FEATURES:

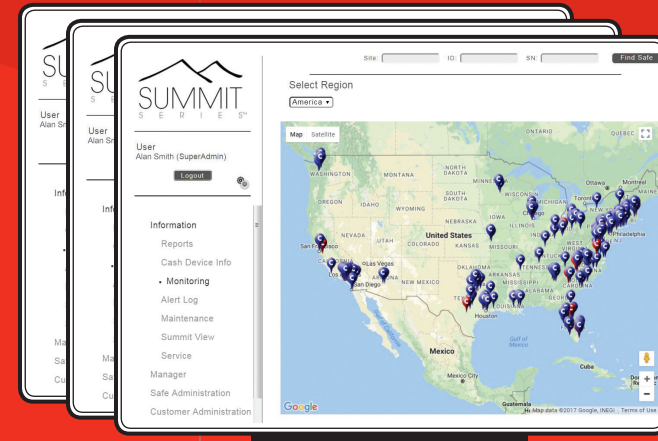

Complete Remote Control

Settings, users, permissions and alerts are all managed through the Summit Control web portal. No site visits are required to be able to view or change any setting, add or remove a new user, or reset a forgotten password.

Full Monitoring and Actionable Alerts

Real-time site monitoring via the map view provides a global view of all locations. Configurable email alerts allow you to receive only the information that is important to your business, and may require attention or action.

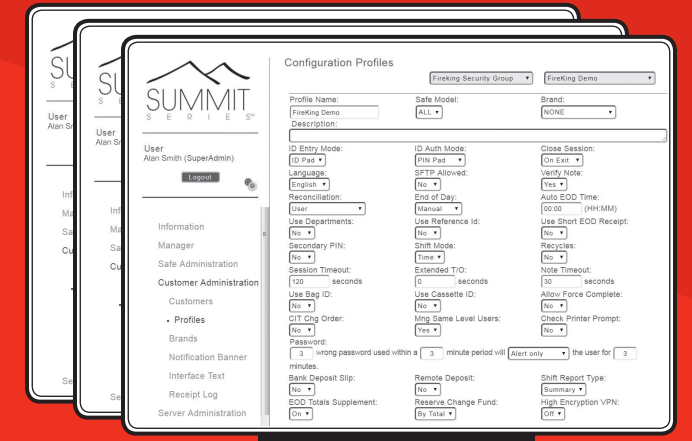

Comprehensive Reporting

Full suite of reports including Day Reports, Content Removals, Deposit Activity, and Cash Totals. Reports can be run for a specific site or across all locations using the consolidated reports.

Consistent, Approved Configurations

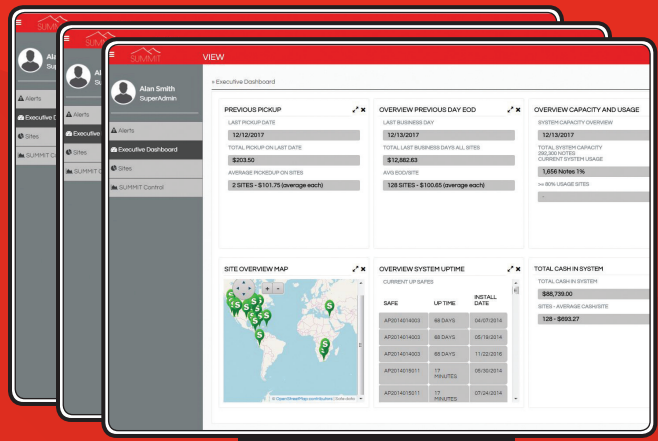

Profiles are created according individual requirements. The profile is applied to every safe installed so configuration is not required at installation. All systems will operate the same way and changes can be made to the entire field base with one profile change, no site visits required.

SUMMIT VIEW FEATURES:

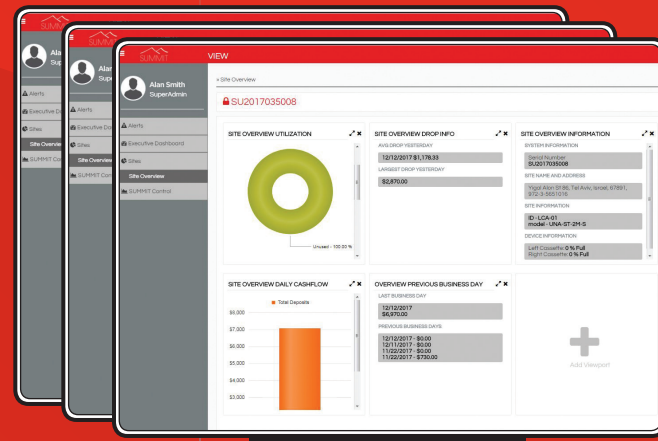

Customizable Executive Dashboard

See only the information that is important to your business by arranging, removing, adding, or sizing tiles that display real-time data across your entire footprint. Business day totals, pickup dates and amounts, system cashflow, and capacity utilization, are just some of the available tiles.

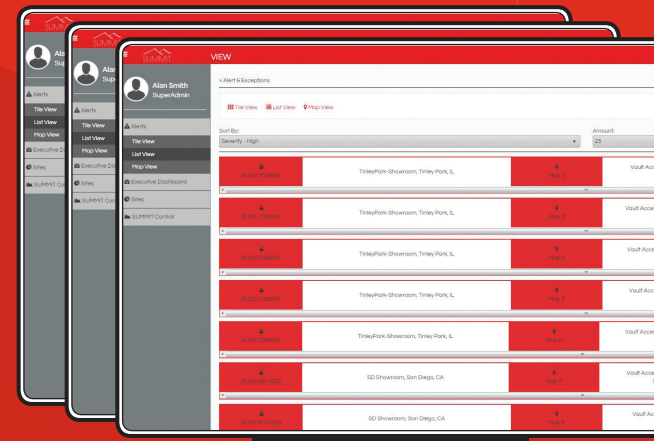

Site-Level Overview

Customizable tiles are also available at the site-level. View deposit information, daily cashflow, business day totals, pickup dates and amounts, and capacity utilization including denomination breakdowns, all on one easy, customizable, web page.

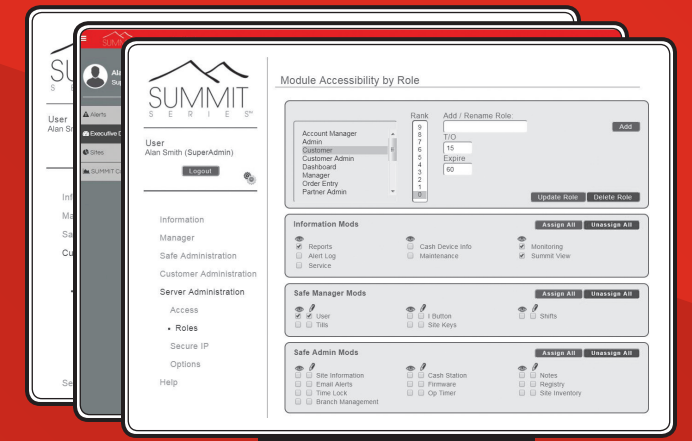

Multiple Alert Views

View alerts from your safes with tile, list, or map views. Sort by priority, to see critical alerts first, or view by site.

Fully Integrated with Summit Control

Navigate seamlessly between Summit Control and Summit View with a single login. All access is permission-based so users only see what they are allowed to see. Each user can have their own views and permissions with centralized control.
